R$ 3.25M per month.
80,000 subscribers.
Only 18k come from paid media advertising.

Where the money goes, what dashboards hide, and what to do next.

■ AS IS

80k new subscribers per month — and the base barely holds

80k	77%	23%	R$3.25M
new subscribers per month	organic: 61.6k/mo would come anyway	driven by paid media 18.4k/mo (true increment)	monthly media budget

DASHBOARD SAYS

50%

of new subs attributed to paid media
(last-click attribution)

vs.

CAUSAL MODEL SAYS

23%

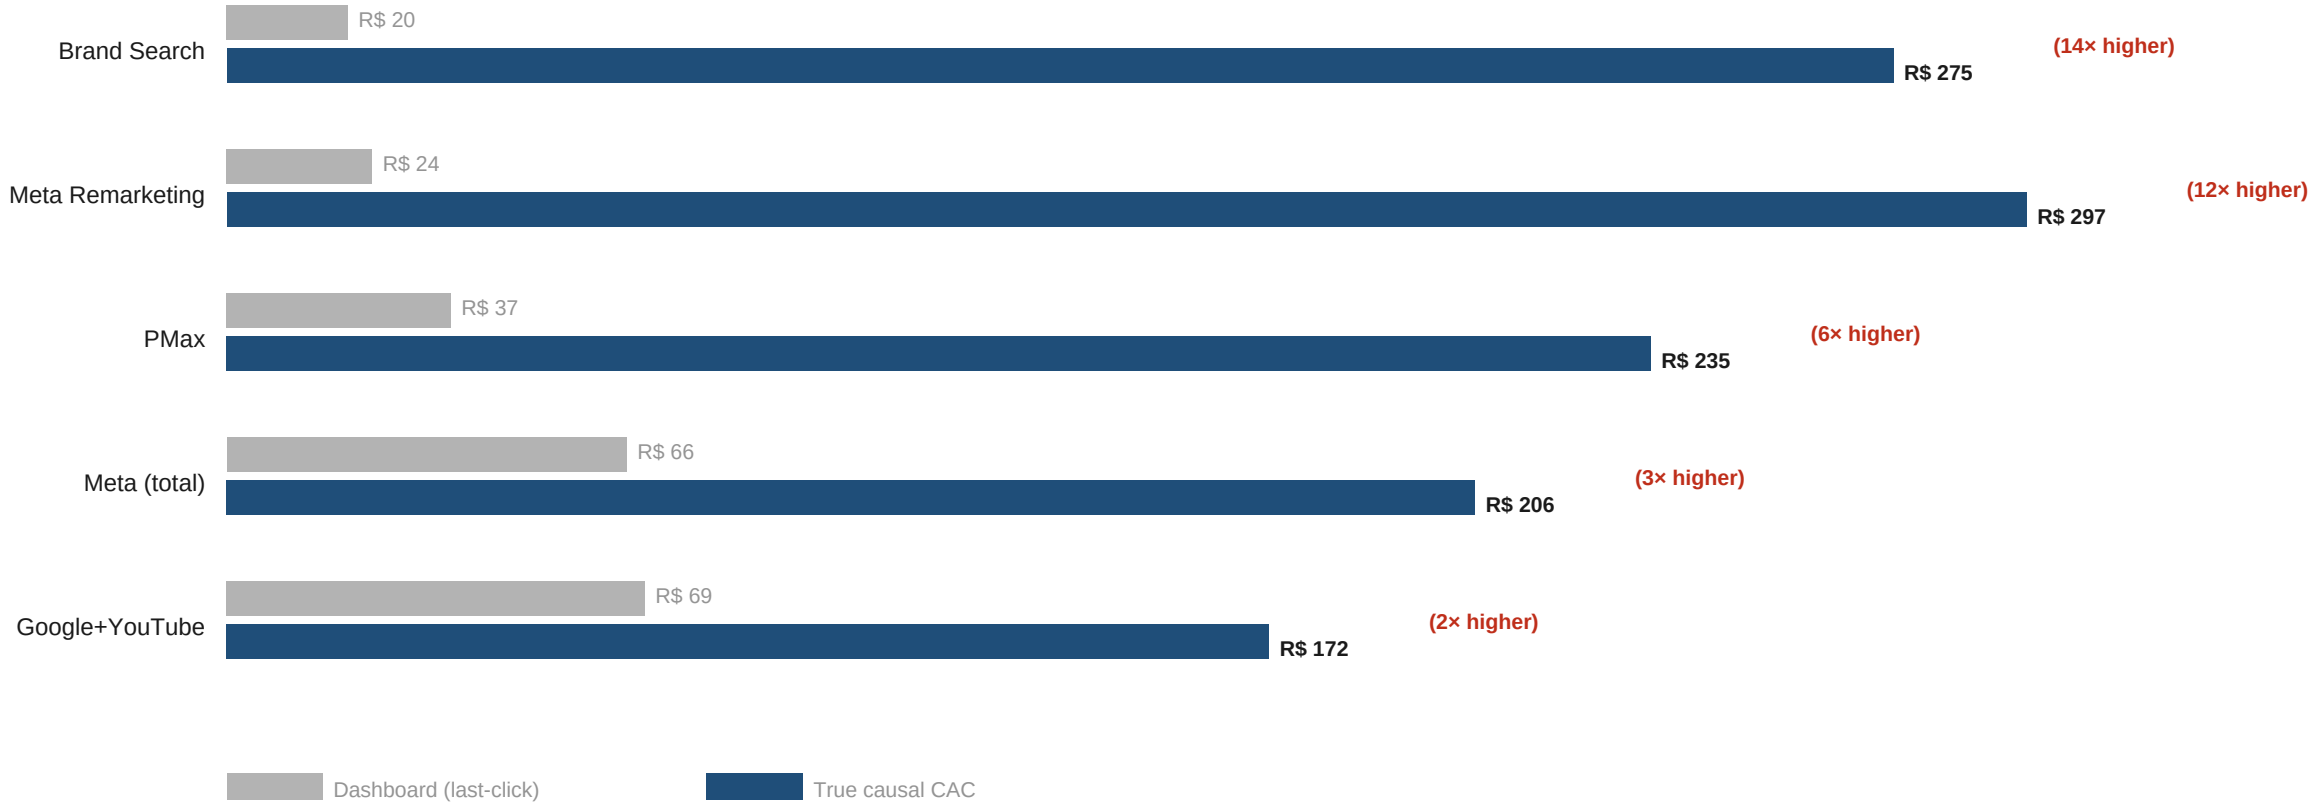
of new subs attributed to paid media
(geo-holdout counterfactual)

The base has 1.23M subscribers and loses ~80k/month. Acquisition replaces churn.
Dashboards attribute 50% of entries to paid media; causal measurement says 23%.
The other 77% would have subscribed regardless — organic demand, content, word-of-mouth.

■ AS IS

Dashboards show a CAC up to 14× lower than the real cost

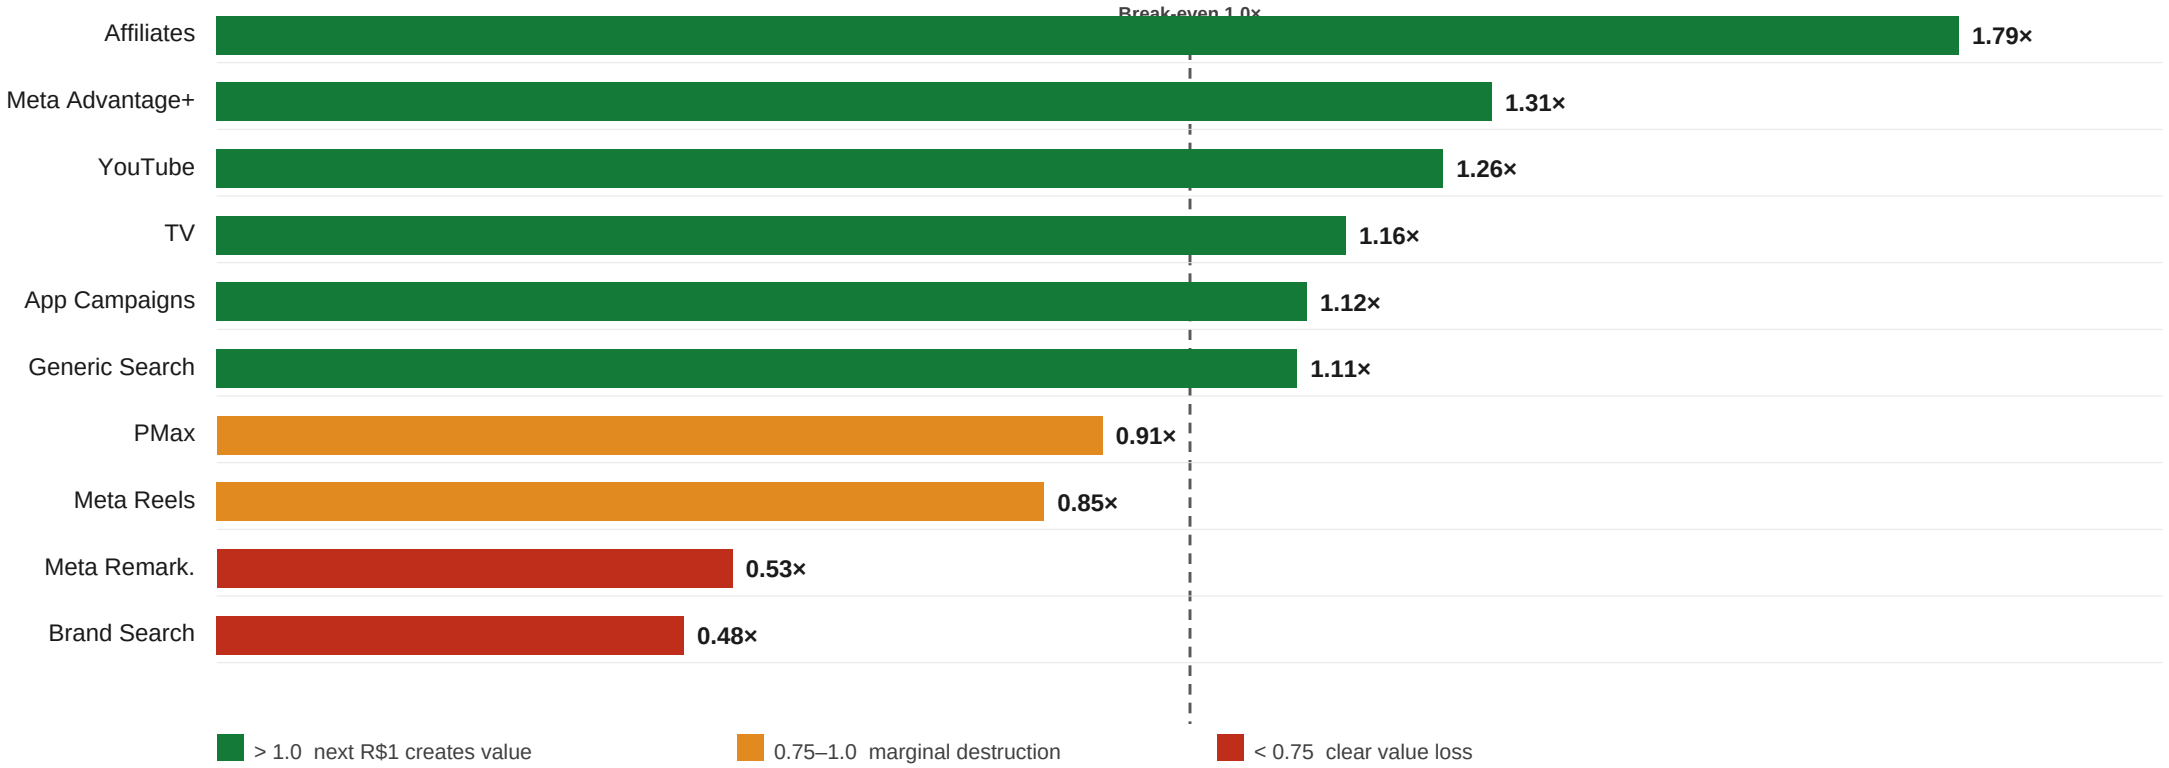
Gray = dashboard (last-click) · Dark blue = true causal CAC



The opposite also happens:
TV and YouTube look expensive (R$678 and R$541 in the dashboard) — their true CAC is R$213 and R$149. Both systematically undervalued.

Four channels return less than R$1 for every next R$1 invested

Contribution value per additional R$1 · Below 1.0 = next R$1 destroys value



Only the bundle pays for the next subscriber at the margin

Claro tv+ Bundle

1.8×

LTV/CAC at marginal cost

Avg: 3.5×

Payback: 5.1 months

✓ Profitable at the margin

Premiere Futebol

0.8×

LTV/CAC at marginal cost

Avg: 1.5×

Payback: 7.8 months

■ Below break-even at margin

Telecine

0.7×

LTV/CAC at marginal cost

Avg: 1.3×

Payback: 13.6 months

✗ Value-destroying at margin

Budget: R$3.25M/month, contribution LTV. Telecine margin: 45% (reported). Premiere (38%) and bundle (33%) are assumptions.

The decision: move budget without increasing total spend

▲ INCREASE

Affiliates
12.5% → 18.0%

YouTube
20.0% → 21.6%

Meta Adv+
12.5% → 14.2%

▼ REDUCE

Meta Remarketing
5.0% → 2.5%

Meta Reels Video
7.5% → 5.2%

PMax
7.5% → 5.9%

Brand Search
3.75% → 1.9%

+R$ 1.65M / year in contribution LTV (+1.9%)

Same R$3.25M monthly budget — pure reallocation gain from equalizing marginal iCAC

Creatives: stop scaling price-offer ads. Incremental CAC = R$222 vs R$165–169 for soccer, bundle and launch themes.

TO BE ■

Before × After: what changes with incrementality measurement

AS IS = dashboard today (last-click) · TO BE = causal model (geo-holdout incrementality)

AS IS — dashboard / last-click

TO BE — causal model (incrementality)

Metric	AS IS (Dashboard)	TO BE (Causal)	Impact / Interpretation
Marketing share of new subscribers	50%	23%	2× overestimated (–27pp gap)
iCAC · Brand Search	R$ 20	R$ 275	14× more expensive than dashboard shows
iCAC · Meta Remarketing	R$ 24	R$ 297	12× more expensive — organic conversion attributed
iCAC · PMax	R$ 37	R$ 235	6× more expensive — same logic as brand search
iCAC · Meta Advantage+	R$ 66	R$ 206	3× more expensive than reported
iCAC · TV (looks expensive in dashboard)	R$ 678	R$ 213	3× cheaper — systematically undervalued
iCAC · YouTube (looks expensive)	R$ 541	R$ 149	4× cheaper — major incremental reach channel
iCAC · Affiliates	—	R$ 168	1.79× margin — best conversion channel by R$1
Budget · Affiliates	12.5%	18.0% ↑	+5.5pp — most efficient at the margin
Budget · YouTube	20.0%	21.6% ↑	+1.6pp — true iCAC far below dashboard
Budget · Meta Advantage+	12.5%	14.2% ↑	+1.7pp — positive marginal gain
Budget · Meta Remarketing	5.0%	2.5% ↓	–2.5pp — R$0.53 per R$1 invested
Budget · Brand Search	3.75%	1.9% ↓	–1.85pp — true CAC 14× dashboard
Budget · Meta Reels Video	7.5%	5.2% ↓	–2.3pp — R$0.85 per R$1 invested
Annual gain from reallocation	—	R$1.65M/yr	+1.9% contribution LTV — same total budget

Source: synthetic calibrated simulator (streaming-growth-lab). Relative iCACs are hypotheses to validate with geo-experiments.

Three hypotheses to validate before this becomes a decision

1

Geo-experiments in 90 days

Turn off brand search, remarketing and PMax in paired Brazilian states (UFs) and measure what is truly lost vs. what would have converted organically.

2

Real plan margins

Premiere (38%) and bundle (33%) are assumptions. They define which plans still pay for the next subscriber at current iCAC levels.

3

Real channel CAC and spend data

Replace the simulator's relative CACs with actual numbers from Meta Ads Manager, Google Ads and the operations team to calibrate the model with production data.

Disclaimer:

The base is synthetic and calibrated with assumptions. Relative CACs across channels are hypotheses to validate, not measurements.
